SUMMARY

Aspiring Data Analyst with hands-on experience in Excel, Python, SQL, Power BI, and PostgreSQL through end-to-end analytics and machine learning projects. Skilled in data cleaning, exploratory data analysis (EDA), statistical analysis, dashboard development, and transforming large datasets into actionable business insights.

EDUCATION

Master of Computer Applications , Arka Jain University, Jamshedpur	Expected 2027
Bachelor of Computer Applications , Aryabhata Knowledge University, Patna	2024

SKILLS

Languages	Python, SQL
Python Libraries	Pandas, NumPy, Matplotlib, Scikit-learn
Machine Learning	Scikit-learn, Model Evaluation, Classification, Regression
Business Intelligence & Visualization	Power BI, DAX, Excel, Interactive Dashboards, KPI Reporting, Data Storytelling
Databases	PostgreSQL, MySQL
Tools	Jupyter Notebook, Git/GitHub, VS Code, Streamlit

EXPERIENCE

Software Developer Intern Traitsoft Private Limited	Sep 2024 – Mar 2025 <i>On-site · Full-time</i>
---	---

- Built and maintained backend applications in Python with REST APIs for reliable frontend-backend data exchange.
- Wrote and optimized SQL queries in MySQL, and cleaned/validated data prior to database writes to improve accuracy and consistency.
- Collaborated with cross-functional teams to troubleshoot backend issues, optimize SQL queries, and ensure data integrity across application workflows.

PROJECTS

Flipkart Product Price Intelligence Dashboard	GitHub
--	------------------------

- End-to-End E-commerce Price Intelligence Analysis: Performed data cleaning and analyzed 19,922 Flipkart products across 7 months using Excel, Python, PostgreSQL, and Power BI to uncover pricing strategies, discount trends, and category-level performance.
- Found Clothing made up 31% of the catalog and Automotive carried the highest average discount (54.7%), revealing a value-focused pricing strategy, validated via DAX-based KPI measures.
- Quantified approx. Rs. 2 crore in total customer savings (avg. Rs. 1,005/product) across the analyzed catalog.

Diabetes Disease Analysis Dashboard	GitHub
--	------------------------

- Built a 3-page interactive Power BI dashboard, driven by exploratory data analysis (EDA), analyzing PIMA (768 patients) and WHO Global Diabetes (198 countries, 1980–2014) datasets.
- Found patients with Glucose >140 and BMI >30 had a 75.7% diabetes rate, the strongest combined risk predictor identified.
- Revealed the Eastern Mediterranean had the highest average diabetes prevalence (9.2%), with India showing the fastest growth from 1980–2014.

World Happiness Score Prediction & Analytics Dashboard	GitHub Live Demo
---	--

- Built and deployed an interactive Streamlit dashboard predicting happiness scores from 2015–2023 World Happiness Report data, using feature engineering to prepare model inputs.
- Benchmarked multiple ML models using cross-validation and R^2 /MAE/RMSE to select the best-performing predictor.
- Applied SHAP explainability to surface top feature drivers and generate plain-English, actionable explanations for each prediction.
